WHAT IS PHOTOBIOMODULATION (PBM)?

Photobiomodulation (PBM) is a gentle light therapy that helps reduce pain and swelling while speeding up healing. It works with your body at the cellular level to support natural recovery. PBM can provide relief from jaw pain (TMJ), canker sores, sensitive teeth, and discomfort after dental procedures.

A HEALTHIER SMILE STARTS WITH LASER CARE

Your comfort and healing are our top priority. With the soft tissue laser, we're proud to offer minimally invasive, advanced treatments designed around you. From improving oral health to easing recovery, laser dentistry helps make your dental visits more comfortable. **Discover a new standard of care that redefines your dental experience.**

Discover advanced, patient-friendly care with soft tissue lasers. This gentle, effective technology helps make many dental procedures more comfortable and efficient. Laser dentistry offers a modern, more relaxed treatment experience with excellent results for you!

ASK YOUR DENTIST TODAY ABOUT HOW LASER DENTISTRY CAN ENHANCE YOUR DENTAL CARE.

WHAT IS A SOFT TISSUE LASER AND HOW DOES IT BENEFIT ME?

Soft tissue lasers use light energy to gently treat the soft tissue in the mouth, like your gums. The light targets only the problem areas in the tissue, allowing for precise treatment with minimal discomfort. Lasers offer many advantages for your dental treatments:

PRECISION YOU CAN TRUST:

Soft tissue lasers are designed to work with incredible precision—removing only the damaged areas while leaving healthy gum tissue unharmed. This targeted approach helps reduce irritation and supports faster healing.

GENTLE ON YOU:

Laser treatments are gentle and less invasive than traditional methods, helping to reduce discomfort and ease dental anxiety. With a quick recovery, many patients find laser dentistry to be a more relaxing and positive experience overall.

A HEALING PARTNER:

Focused Photobiomodulation (PBM) treatments boost the body's natural healing by improving circulation, reducing inflammation, and supporting tissue repair. This promotes a smoother recovery and helps keep the mouth healthier, naturally.

HOW ARE LASERS USED IN DENTAL CARE?

Laser dentistry offers a range of gentle, effective treatments. From improving the look of your smile to supporting better gum health, soft tissue lasers make many common procedures more comfortable.
